## PROJECT

---

### Main project

**Title:** A visual aid with integrated reading assistant for completely blind.

**Description:**

It is an IOT based project, it can be used to walk blind people with the help of a stick device, if a stick device can find any object it can send an alert as audio, in audio it says the object of the direction.

### Mini Project

**Title:** YouTube spam comments detection using machine learning.

**Description:**

This project can be built based on various machine learning algorithms with Python, if any user tries to post a comment, first we must check the comment with the help of data sets and various algorithms in machine learning whether the comment is spam or not, If the comments are spam it shows a warning alert otherwise post successfully.
